

The image is a composite of two photographs showing detector components. The left photograph shows a stack of dark, thin layers (HGC Layer) and a thicker stack of dark blocks (Tungsten) within a metal frame. The right photograph shows a large, curved, gold-colored component (Photek 240) next to a blue circular component. Labels with arrows point to these specific parts.

**HGC Layer**

**Photek 240**

**Tungsten**
